The FOIL method won't work for anything other than two binomials because there are more terms than the acronym FOIL allows, as Math is Fun accurately points out.. So, we're going to take the smaller of the two polynomials and distribute its terms into the larger using all of the same techniques...

What is the FOIL Method? (Simply Explained with 19+ Examples!)

Multiplying Polynomials - The FOIL Method covers using the distributive law to expand the product of two polynomials. The acronym FOIL (First-Outside-Inside-Last) is derived from the process used to expand two binomials. There is an example using higher order polynomials that employs the same principle.

In elementary algebra, FOIL is a mnemonic for the standard method of multiplying two binomials —hence the method may be referred to as the FOIL method. The word FOIL is an acronym for the four terms of the product: . First ("first" terms of each binomial are multiplied together); Outer ("outside" terms are multiplied—that is, the first term of the first binomial and the second term of the ...

Section 1-5 : Factoring Polynomials. Of all the topics covered in this chapter factoring polynomials is probably the most important topic. There are many sections in later chapters where the first step will be to factor a polynomial. So, if you can't factor the polynomial then you won't be able to even start the problem let alone finish it.
