If  $f$  is differentiable on  $\mathbb{R}^2$ , it is said to be real-differentiable, and if  $f$  is differentiable on  $\mathbb{C}$ , it is complex-differentiable. A function is complex-differentiable if and only if it is real-differentiable and the Cauchy–Riemann equations hold.

Calculus II tends to be a very difficult course for many students. There are many reasons for this. The first reason is that this course does require that you have a very good working knowledge of Calculus I. The Calculus I portion of many of the problems tends to be skipped and left to the student to verify or fill in the details.

Welcome to my math notes site.

Contained in this site are the notes (free and downloadable) that I use to teach Algebra, Calculus (I, II and III) as well as Differential Equations at Lamar University. The notes contain the usual topics that are taught in those courses as well as a few extra topics that I decided to include just because I wanted to.

Calculus, originally called infinitesimal calculus or "the calculus of infinitesimals", is the mathematical study of continuous change, in the same way that geometry is the study of shape and algebra is the study of generalizations of arithmetic operations.. It has two major branches, differential calculus and integral calculus; the former concerns instantaneous rates of change, and the slopes ...
