Subtracting Integers is not too far off from adding integers. One good strategy for subtracting integers is to rewrite your expression into an addition problem. For example: $-1-6$ can become $-1+(-6) = -7$ When I am looking at problems with integers having opposite signs (one positive, one negative) I can also rewrite the expression but then I find the difference of the two numbers.

Defining Subtraction. Subtraction means “add the opposite.” That is, if a and b are any integers, then $a - b = a + (-b)$. Thus, for example, $-123 - 150 = -123 + (-150)$ and $-57 - (-91) = -57 + 91$. In each case, subtraction means “add the opposite.” In the first case, subtracting 150 is the same as adding -150 .
